4. Accepted names with **taxonomic issues**.

1. Accepted names.

- ⌘ gilled (at least some species)
- non-gilled (entirely)
- ✖ gilled if and only if some particular genus (*Descolea* or *Trametes*) is treated as s.l.
- ★ type specimen sequenced
- ✓ type species otherwise sequenced
- other species sequenced
- ✗ not sequenced
- † fossil genus
- ? phylogenetic doubt (table in section 4)
- ?? inconsistently accepted (table in section 4)
- ! incorrect according to the *ICN* (tables in section 3)

Sorted by family as it appears in the tree, then alphabetically. The accepted epithet for the type species is given in parentheses, if different from that of the nomenclatural type species. Invalid names are enclosed in quotation marks.

2. Deprecated names.

Sorted alphabetically. When multiple reasons for depreciation apply, the reason listed earliest in this key is chosen. The accepted name for the type species is given in parentheses; in some cases only the genus is known. Typonyms, untypified names, etc. are not considered for sequence searches. Invalid names are enclosed in quotation marks.

orth. var.	orthographical variant

NOTE. The right column contains the superficially correct name among the would-be synonyms, i.e., the “correct” name according to priority, existing conservation, etc. This is not an endorsement of maintaining that name under the potential synonymy. In some cases a superficially incorrect name should be maintained and conserved.
